Safety Precautions

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

For U.S.A.

Warning:

This equipment generates and uses radio frequency energy and if not installed and used properly, I.e., in strict accordance with the instruction manual, may cause harmful interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment.

For Canada

Warning:

This digital apparatus does not exceed the Class A limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

WARNING:

TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

Product Precautions

- Handle the camera with care. Do not abuse the camera. Avoid striking or shaking it. Improper handling or storage could damage the camera.
- Do not pull or damage the camera cable.
- During camera use, do not wrap the unit in any material. This will cause the internal temperature of the unit to increase.
- Do not expose the camera to moisture, or do not try to operate it in wet areas.
- Do not operate the camera beyond its temperature, humidity and power source ratings.
- While the camera is not being used, keep the lens or lens cap on the camera to prevent dust or contamination from getting in the CCD or filter area and scratching or damaging this area.
- Do not keep the camera under the following conditions:
 - In wet, moist, and high humidity areas
 - Under hot direct sunlight
 - In high temperature areas
 - Near an object that releases a strong magnetic or electric field
 - Areas with strong vibrations
- Use a soft cloth to clean the camera. Use pressured air spray to clean the surface of the glass. Do not scratch the surface of the glass.

Caution for PCs with Intel Core i3, i5 or i7

- If the USB camera is used with a PC that has the Intel Core I series (i3, i5 and i7) chipset, the following problems may occur:

- An image cannot be obtained with the USB camera
- Frequent frame drop

This issue may occur with other USB camera manufacturers as well.

- Cause of the issue:

The image data cannot transfer to the PC because the Intel Core i3, i5 or i7 CPU frequently switches to the power save mode while the image is transferring.

- Solutions for the issue:

1. Disable the power save mode by changing the BIOS settings.

Users will be responsible for any changes made to the BIOS setting.

The power consumption and the heat of the PC will increase whenever the power save mode is disabled. Please understand and accept this before disabling the power save mode.

2. Disable the power save mode with the Sentech PC power management software (StPowerCtrl)

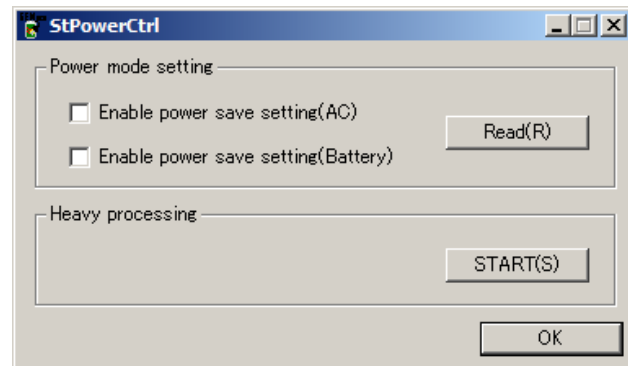

The power save mode can be disabled with the Sentech PC power management software "StPowerCtrl".

- A. Install "StCamSWare(v1.10)" or later revision.
- B. Launch "StPowerCtrl" from Windows start => Sentech => StCamSWare.
- C. Disable the two check boxes.

Before:

After:

The power consumption and heat of the PC will increase when the power save mode is disabled. Please understand and accept this before disabling the power save mode.

3. Change the camera clock from "Normal" to "½" or "¼". (This will reduce the frame rate)

7	Strobe Signal Output (Exposure Time)	Positive / Negative

The polarity for the Trigger Signal Output, the Exposure End Signal Output, the CCD Read Out End Signal Output, the Strobe Signal Output (Time Setting) and Strobe Signal Output (Exposure Time) is selectable via software.

(Note: It is recommended to set negative polarity to reduce the timing delay of the photo-coupler)

b. Characteristics of the Output Signals

Input Signal Level: High: IO VCC IN (+3 to +26.4V)

Low: Less than 0.8V

Input Signal Duration: The signal duration should be longer than "Tf+Tr"
 Please check the "Output signal response timings" for Tf and Tr.
 The signal duration can be adjusted by the software.

Input Signal Response Timings:

	IO_VCC			
	3.3[V]	5.0[V]	12[V]	24[V]
Td	41.6 [us]	56.8 [us]	49.6 [us]	44.8 [us]
Tr	126 [us]	76.8 [us]	81.6 [us]	49.6 [us]
Ts	1.68 [us]	1.72 [us]	1.70 [us]	1.88 [us]
Tf	1.8 [us]	1.78 [us]	3.34 [us]	4.88 [us]
